

Healthcare Operational Analytics Report

— Primary Care Visit Trends |

January–June 2026

Section 1 — Executive Summary

This report analyzes operational efficiency and patient flow across 180 patient visit records from January through June 2026. The primary finding indicates that while Cardiology drives the highest patient volume, Mondays represent a critical operational risk with the highest no-show rates across the organization.

Section 2 — Data Overview

The analysis is based on **180 fictional patient visit records** spanning the first half of 2026. The data was cleaned and standardized to ensure consistency across the following fields:

- **Visit Date & Time:** Used to identify daily and monthly trends.
- **Department:** Categorizing data across specialties such as Cardiology, Neurology, and Primary Care.
- **Appointment Type:** Classifying visits as Consultations, Follow-ups, or Checkups.
- **No-Show Status:** Quantifying patient absenteeism.
- **Insurance Type:** Monitoring payer distribution.

Section 3 — Key Findings

Data analysis conducted via the Power BI dashboard revealed the following trends:

Metric	Finding
Peak Visit Times	9:00 AM, 1:00 PM, and 5:00 PM
Highest No-Show Month	May (20% No-Show Rate)
Highest No-Show Day	Monday (~20%)
Highest Volume Dept	Cardiology (33 visits)

Healthcare Operational Analytics Report

— Primary Care Visit Trends |

January–June 2026

Metric	Finding
Avg Visit Duration	Endocrinology (37 mins) vs. Primary Care (32 mins)

Visual evidence supporting these findings can be found in **Department & Appointment Breakdown**, **No Show Analysis**, and **Visit Volume Overview**.

Section 4 — Recommendations

- **Strategic Staffing:** Align clinical and administrative staffing levels with the peak demand hours of 9:00 AM, 1:00 PM, and 5:00 PM to manage patient flow effectively.
- **Targeted Interventions:** Implement aggressive reminder protocols (text and phone) specifically for Monday and Saturday appointments to combat the 18–20% no-show rates.
- **Resource Allocation:** Review scheduling capacity and room availability for Cardiology, as it is the highest-volume department.
- **Workflow Efficiency:** Investigate the longer visit durations in Endocrinology to determine if additional support staff or streamlined documentation processes are required.

Section 5 — Methodology

The analysis was conducted using a multi-phase technical approach:

1. **Data Preparation:** Raw records were cleaned, de-duplicated, and standardized within Excel.
2. **Exploratory Analysis:** Pivot tables and statistical charts were utilized to isolate trends, peak times, and departmental percentages.
3. **Visualization:** An interactive Power BI dashboard was developed to provide stakeholders with real-time monitoring of the 13.33% overall no-show rate.
